

Am7 Compatible Android device list

As of September 2022

*To suppress the noise caused by radio waves, we recommend activating "Flight mode" in Android settings during recording.

**Am7 SYSTEM FIRMWARE version 2.01 supports Samsung Exynos chip and resolves Galaxy noise problem.

Please update from version 2.0 or earlier with latest version of Handy Recorder App.

System Firmware version 2.01

*1 Support for Samsung Exynos chips and fixing noise problem of Galaxy series requires Am7 SYSTEM FIRMWARE version 2.01 or later.

If you are using an older version of SYSTEM FIRMWARE, please update the HandyRecorder app to the latest version and execute FIRMWARE UPDATE from the MENU.

You can check the version of Am7 SYSTEM FIRMWARE by selecting [MENU]-[VERSION] of the HandyRecorder app.

*2 Android9 devices can work with "Mobile HandyShare" but have some functionality limitation.

e.g. Monitor sound cannot be output during Video recording. Audio level meter L and R show same level (seems like mono, but record stereo).

*3 In order to use a USB device on OPPO, you need to activate "OTG Connection" from the [Additional Settings] in the [Settings] menu.

(Note: OTG connection automatically turn off when not in use for 10 minutes.)

*4 With Google Pixel 4a, even if the Am7 FW update finish is displayed, it may not be completed internally.

In that case, you can complete the update correctly by connecting via the TYPE-C USB HUB between Pixel 4a and Am7.

*5 Some of Android OS11 devices show unstable audio recording when shooting video with Am7. The "Safe MODE" option which is added in Mobile HandyShare ver.1.0.0.25 will improve stable audio recording.

You can access this option in settings menu.

Settings > Safe MODE

Safe MODE has some limitations,

- Direct Monitoring doesn't work. Audio monitor is muted during shooting video.

- Audio level meter L and R show same level (seems like mono, but record stereo).
